

PV Pro Mounting Solution

On Roof Anti-Theft System

Features

- Universal mounting system on all roof types
- Incredibly simple to use, save average 40% of installation time
- Unique Anti-Theft design
- Components are made of high quality aluminium and stainless steel
- Mechanical calculation and test to ensure maximum safety and durability
- 10 years product warranty (limited)

PV Pro Roof mounting systems are uniquely manufactured using only High Quality materials to guarantee durability.

Incredibly simple to use patented systems mean that installing this strong system will considerably reduce installation time. Importantly the system has removed the number of components, which means considerably less time on continually attaching rails to hooks etc. using multiple components.

The PV PRO mounting systems have been developed by seasoned designers and experienced consultants dedicated to providing high-quality products and all-round services. The system has solutions for many applications for PV Solar installations from simple on roof systems, flat roof in high wind areas to large Solar Farm sized projects.

Feature

Fully PreAssembled Clamps

The End and Mid clamps are substantial fully preassembled parts which simply clip into the channel in the rail, and the motion of tightening the screw from the top also fully locks the clamp in place. These substantial mid and End clamps are designed for use for both Portrait and Landscape installations with the rail installed Horizontally.

Feature

On Roof Security

The PV PRO on roof mounting system is uniquely designed to protect your investment. Just as a locking wheelnut on a car – the locking bolts for the system have a specially adapted fitting to add security to the panels wherever they may be installed.

Feature

Patent universal quick fit system

All the hooks are supply with pre fixed attachments. These are a patented part of the roof mounting system. These are spring loaded units which clip into one or the grooves on the rails, and are simply tightened. This is a very quick and simple process with very easy access to the tightening screw.

On Roof System Components

Pantile Roof Hook

Stainless steel, pre-assembled
P/N: GB00008

Concrete Tile Roof Hook

Stainless steel, pre-assembled
P/N: GB00075

Slate Tile Roof Hook

Stainless steel, pre-assembled
P/N: GB00066

Aluminium Rail

Aluminium Rail 2.8M
P/N: GB02019

Rail Connect Bar

To connect Aluminium Rail 2019
P/N: GB02023

Flange Bolt

Stainless steel
P/N: GB01133

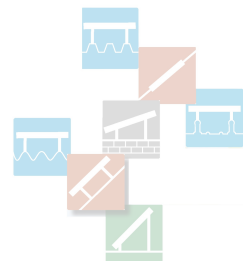

End Clamp

Clear anodized, pre-assembled
P/N: GB01218

Middle Clamp

Clear anodized, pre-assembled
P/N: GB01219

Safety. Reliability. Flexibility
